## Surgical instrument for joining prosthesis to artery - has trocar-like shaft with conical point and neck section onto which end of vessel prosthesis is slid with clamps provided for retention

Assignee: **QUATCHADZE G Individual**  
 Inventor(s): **none**  
 Accession / Update: **1997-505015 / 199747**  
 IPC Class: **A61B 17/115 ;**  
 Derwent Classes: **P31;**

Derwent Abstract

### DERWENT RECORD

(DE29713335U) The endoscopic instrument consists of a trocar-like sleeve shaft (4) with a conical point (5). The shaft has a handle section and an operating mechanism which acts at the distal end. The shaft has a circumferential groove-like neck section (7) for accepting the expandable end (9) of a vessel prosthesis (2) which slides onto the shaft. The prosthesis is intended to be inserted into the side wall of an artery (3). Several C-shaped clamps (11) are provided in close proximity to each other which are operated by a clamp closer (16) mounted in the neck area of the shaft. **USE/Advantage** - Surgical instrument joins prosthesis to artery without requiring open surgery procedure.
